Report WR-79-3
Summer

Project Manager
Data Processing
Programming

Joel Kurtz
Fred Nobles
Patrick Chau

In this report we present seasonal wind roses for Ontario wind stations based on data collected by the atmospheric Environment Service of Environment Canada and the Air Resources Branch of Environment Ontario. These are soon to be supplemented by statistics from wind stations operated by Ontario Hydro.

The report also shows unbiased wind roses where it was felt to be appropriate.

Publications used in compiling these wind roses include:

1. Air Resources Branch, Wind Data Files 1970-1977
2. Atmospheric Environment Service, Canadian Normals, Vol. 3, Wind, 1955-1972
3. Meteorological Branch, Dept. of Transport, Climatic Summaries for Selected Meteorological Stations in Canada, Vol. 11 (revised) 1959
4. Meteorological Branch, Dept. of Transport, Climatic Summaries for Selected Meteorological Stations Vol. 11, 1948

HOW TO USE THIS REPORT

1. As in our first publication WR 78-1 this report, is used in the same manner. You have a list of stations that refer to the appropriate page number.
2. To find the wind rose for an area of interest find the nearest wind stations from the Map of Wind Stations (Figure 1), then refer to the given page number.
3. In a few instances, you will be able to compare, the unbaised wind rose with the originals. The same-transformation information used in our WR-78-1A applies to these bias.
